during the last thirty years biophysicist and philosopher henri atlan has been a major voice in contemporary european philosophical and bio ethical debates in a massive oeuvre that ranges from biology and neural network theory to spinoza s thought and the history of philosophy and from artificial intelligence and information theory to jewish mysticism and to contemporary medical ethics atlan has come to offer an exceptionally powerful philosophical argumentation that is as hostile to scientism as it is attentive to biology s conceptual and experimental rigor as careful with concepts of rationality as it is committed to rethinking the human place in a radically determined yet forever changing world book jacket

the application of complexity theory to management and the social sciences has been a key development in theory and practice over the last decade this approach questions the possibility of finding universal methods of practice and proposes a pragmatic and humanistic management style that evolves out of a reflective method the focus is on practitioners observing patterns of similarity and being adaptable in decision making bringing complexity theory into management reveals the importance of organizational culture and effective communication because people their values and their objectives are at the heart of this method information technology provides a framework for complex communication and knowledge use but it cannot replace highly developed professional negotiations and cooperation this book argues that the complexity of the public service world limits the usefulness of classical and rational scientific management approaches such as new public management excessive marketization threatens a collaborative approach and overly rigid approaches to performance management and strategic management can be dysfunctional managing complexity in the public services 2nd edition advances a method of management practice that copes with the stark realities of the complex and unpredictable public world it develops pragmatic management practices from action research that will be valuable to both academics and practitioners the result is a new value based practice for the post crisis public service world

the generation of meaning is the most fundamental process of the mind it underlies all major mental functions such as intelligence memory perception and communication not surprisingly it has been one of the most difficult processes to understand and represent in a model of human cognition dr christine hardy introduces two fundamental concepts to address the complexity and richness of meaning first she discusses semantic constellations which constitute the basic transversal network organization of mental and neural processes second she addresses a highly dynamic connective process that underlies conscious thought and constantly gives birth to novel emergents or meanings taken together hardy asserts the mind s network architecture and connective dynamics allow for self organization generativity and creativity they can also account for some of the most interesting facets of mental processes in particular nonlinear shifts and breakthroughs such as intuition insights and shifts in states of consciousness this connective dynamic does not just take place within the mind rather it involves a continuously evolving person environment interaction meaning is injected into the environment and then retrojected somewhat modified back into the psyche this means that simultaneously we are both perceiving reality and subtly influencing the very reality we perceive objects events and other individuals the way in which we think and feel both individually and collectively interacts with the physical world and directly shapes the society in which we live the very same connective dynamic hardy shows is the foundation for those rare yet striking transpersonal experiences known as synchronicity and psychic phenomena we live in a world in which we interact with reality at a very fundamental level hardy s work is a major analysis for scholars and researchers in the cognitive sciences psychology and parapsychology
